

Fidonet on Smartphones

There exist two packages for smartphones:

1. [HotDogEd](#)
2. [AfterShock](#)

Both packages exists for Android.

Below you'll find some links and infos for both packages:

For IOS (iphone) there is no known package that is running ftn software on iphone, but there is a workaround with JamNNTP.

 Hi All!

The International AFTERSHOCK Andriod Client.
 AfterShock is a powerful fidonet client. Easy in setup and usage. It provides basic functionality for mail and echo conferences exchange. Application implements Binkp v1.0 to connect to network nodes. Message stored in SOM and Squish formats (for netmail and echomail respectively).
 It is client-only application. It does not designed to be a node that distributes echomail and accept incoming connections.
